5. Wireframe for a Mobile Application with Localization Features

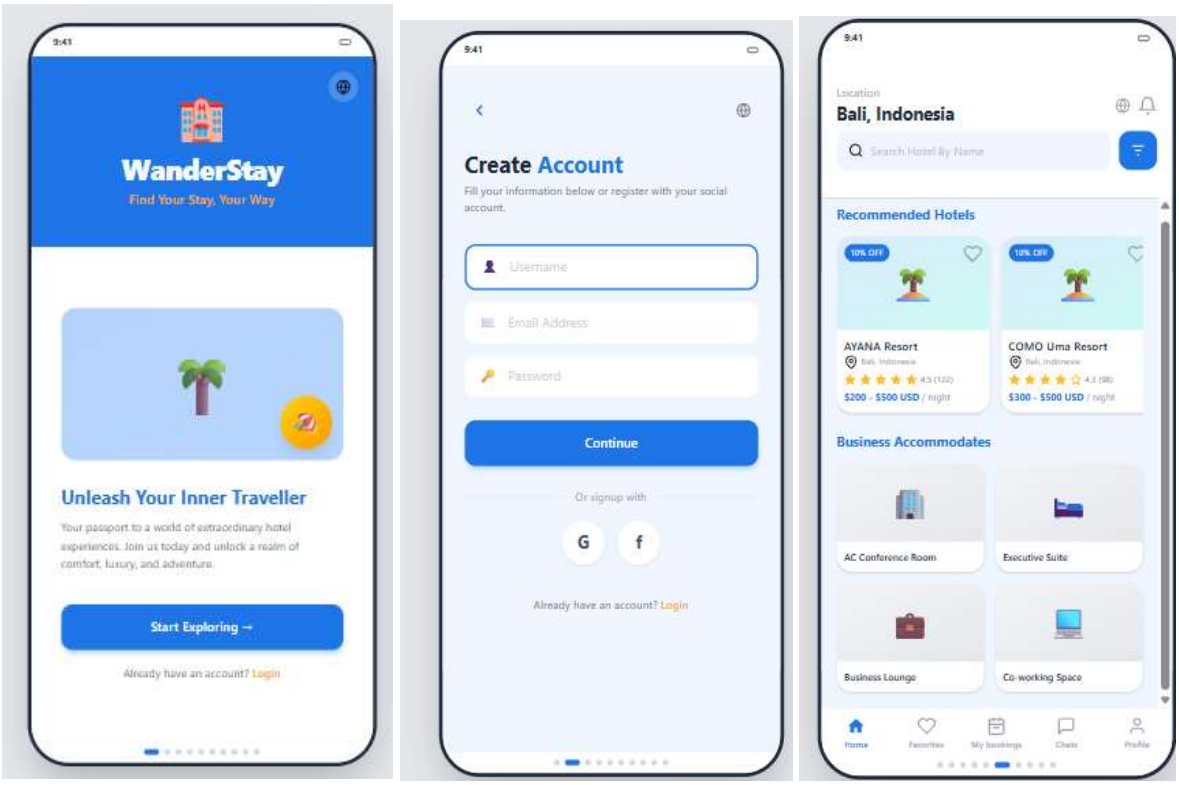

Aim:
To design a wireframe for a mobile application incorporating localization features using Figma.

Procedure:

1. Open Figma and create a new design file.
2. Select a mobile device frame.
3. Design a home screen with a simple layout.
4. Add a location search bar.
5. Include a map area to display the current location.
6. Add a location marker to identify the user's position.
7. Include buttons for current location and navigation.
8. Create a location details screen.
9. Connect the screens using prototype links and preview the wireframe.
