11. Design a Wireframe for a Mobile Application that Incorporates Security Measures Using Figma

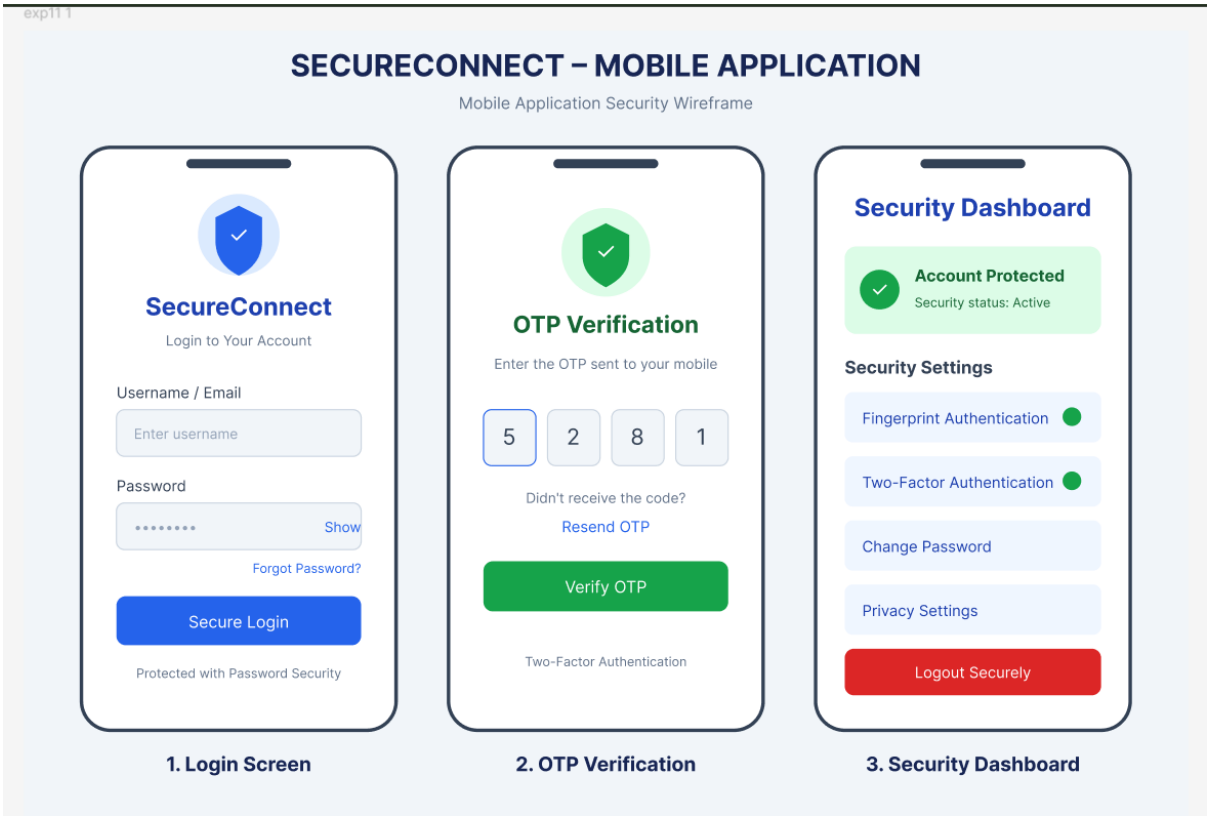

Aim:

To design a mobile application wireframe using Figma that incorporates essential security measures such as user authentication, password protection, OTP verification, and secure access to protect user information.

Procedure:

1. Open Figma and create a new design file.
2. Create a mobile frame by selecting an appropriate smartphone screen size.
3. Design a welcome screen with the application name, logo, and login and signup options.
4. Create a login screen containing email or username and password fields.
5. Add a signup screen with user details and password creation options.
6. Design an OTP verification screen to provide an additional layer of security.
7. Include security features such as password visibility, forgot password, and biometric authentication options.
8. Connect the screens using Figma's Prototype feature to create interactive navigation between pages.
9. Preview and test the prototype to verify that the security-related screens and navigation work properly.

Output:

Result:

Thus, a mobile application wireframe incorporating essential security measures was successfully designed and prototyped using Figma.
