14. Develop a Flowchart in Figma Explaining the Operation of General Packet Radio Service (GPRS)

Aim: To develop a flowchart using Figma that explains the working process of General Packet Radio Service (GPRS) and illustrates how data is transmitted through a mobile network.

Procedure:

1. Open Figma and create a new design file.
2. Create a suitable frame for designing the GPRS flowchart.
3. Add the starting point representing a mobile device requesting a data connection.
4. Draw a process block representing the Mobile Station (MS) initiating a GPRS connection.
5. Add the Base Transceiver Station (BTS) to show the transmission of data from the mobile device to the network.
6. Include the Base Station Controller (BSC) and Serving GPRS Support Node (SGSN) to explain data forwarding and mobility management.
7. Add the Gateway GPRS Support Node (GGSN) to represent the connection between the GPRS network and external packet data networks.
8. Connect all the components using arrows to represent packet transmission and add the destination server or internet as the final stage.
9. Use different colors and flowchart symbols, review the connections, and export the completed flowchart.

Output:

Result:

Thus, a flowchart explaining the operation of General Packet Radio Service (GPRS) and its data transmission process was successfully developed using Figma.
